

INVITATION

Last year, we saw dramatic growth in Fast charge installations in Europe (600) and US (150) and CHAdeMO Association expects to see the growth continue in 2013.

The 2,000 fast charger installations have reached 2,000 globally on January 22nd, 2013, and Europe shall continue to be one of the pioneer locations for e-mobility. In Europe, CHAdeMO Fast Chargers can be found at strategic locations in 23 countries, such as highway service stations linking major cities as well as in shopping center car parks allowing drivers to 'refuel' while they shop. Numerous private network operators and public institutes are committed to the deployments.

To commemorate the continuous growth, we would like to organize the CHAdeMO Annual European Conference. The conference shall include topics such as how network operators plan their deployment this year, and what are the actual use case of CHAdeMO fast charging technology including CHAdeMO bus operating in several regions in Europe.

19th February, 2013, Brussels, Belgium CHAdeMO European Annual Conference 2013

Milestone toward achieving greener Europe

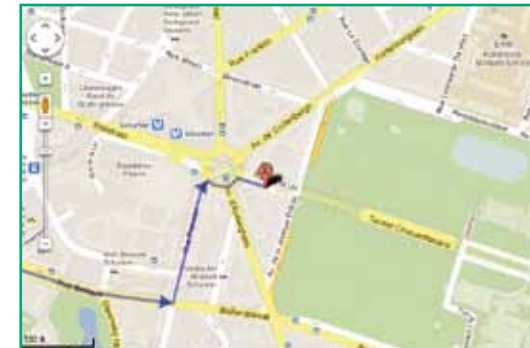

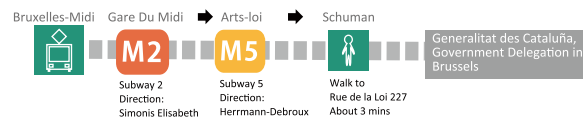

Schedule
